TITLE OF WORK Bank Stabilization and limited archeological excavation of the Jake White Bull Site, 39CO6.

DESCRIPTION OF WORK Protect approximately 290 meters of shoreline and archeological excavation of exposed features along the eroding edge. The analytical report will evaluate the best alternative to halt erosion. Archeological excavation will require background research, excavation of exposed features, data analysis, and report preparation.

JUSTIFICATION THIS IS A PRIORITY SITE FOR THE STANDING ROCK SIOUX TRIBE, AS A RESULT OF CONSULTATION WITH THAT TRIBE. In addition, the Distric is required by law and executive order to preserve and protect significant cultural resources. A 1985 Corps-sponsored symposium identified this site as one that must be protected. It is the consensus of both the SRST and the archeological community that this site be stabilized before additional erosion occurs from Lake Oahe.

Non-deferrable. Site is currently eroding.

ESTIMATED COST AND BASIS OF ESTIMATE: Total = \$600,000; FY02 = \$30,000 for analysis and limited excavation; FY03 = \$20,000 for completion of report; FY04 = \$250,000 to begin bank stabilization; FY05 = \$300,000 to complete bank stabilization.

CONDITION INDICATOR	PROPOSED PROGRAM FY 02
ESTIMATED COST Total = \$600,000 (FY02 =\$30,000)
